# Speed Dials

Your Pod phone system supports three different sorts of speed dials:

1. Depending on your phone model, keys on your phone can be configured to automatically call certain destinations. To configure these keys for speed dials, see **Configuring Your Phones Keys** section.
2. Another sort of speed dial is where you dial a short number (1 or 2 digits), which is configured to call a regular extension or phone number. To configure these speed dials, see **Incoming Calls Setting** section.
3. Your phone system also supports Short Codes. These are short (usually 3, 4 or 5 digit) numbers which are speed dials that can be used and are the same on any phone in your business. They are set up by your administrator and you can view them in CommPortal. See **Short Codes** section on how to do this.

# Monitoring Other Lines

Some models of phones let you monitor the status of other extensions in your business. A key and a lamp on your phone will be associated with that other extension.

- If there is no call in progress on that extension, the lamp will not be lit.
- If a call is ringing on that extension, the lamp will blink quickly.
- If a call is on hold on that extension, the lamp will blink slowly.
- If a call is in progress on that extension, the lamp will be lit solidly.

If you want to answer a call that is ringing on the extension you are monitoring, pick up your handset and press the key for that extension. You will be connected to the caller.

You can also use these keys as speed dials for the other extension. To call the other extension when there is no call in progress on it, pick up your handset and press the key for that extension.

# Paging

Paging (also known as Intercom) is a feature which allows one phone user to press a key on their phone and for whatever they say to automatically come out of another phone's speaker. The user of that other phone doesn't have to answer their phone. It is often used in an executive/assistant pairing.

If you have a paging key on your phone, then to page the destination, follow these steps:

- Pick up your handset.
- Press the paging key.
- Speak into the phone. Your voice will automatically come out of the other phone.

To finish paging, hang up the phone or release the paging key.

# Account Codes

If you have account codes configured on your line then once you have dialled a number which requires a code, you will hear a tone. You will then need to dial a special code before the call is connected.

Your system may use either validated or non-validated account codes. If your system uses validated account codes then you must enter a specific code that has been configured either by your administrator or by you. If your system uses non-validated account codes you can enter any code so long as it is the right length.

If you have account codes your administrator should have explained this to you and told you what codes to use.

# Headset

Most of the models of phones supported by your phone system allow you to connect a headset. This allows you to make and take calls while keeping your hands free for other tasks.

To connect a headset to your phone, turn the phone upside down and connect the headset into the socket marked with the headset icon. To make or answer a call using your headset, press the headset key on your phone.
