Speed Dials

Your Pod phone system supports three different sorts of speed dials:

1. Depending on your phone model, keys on your phone can be configured to automatically call certain destinations. To configure these keys for speed dials, see **Configuring Your Phones Keys** section.
2. Another sort of speed dial is where you dial a short number (1 or 2 digits), which is configured to call a regular extension or phone number. To configure these speed dials, see **Incoming Calls Setting** section.
3. Your phone system also supports Short Codes. These are short (usually 3, 4 or 5 digit) numbers which are speed dials that can be used and are the same on any phone in your business. They are set up by your administrator and you can view them in CommPortal. See **Short Codes** section on how to do this.
