Exploring Pod Connect for iOS/Android

Pod Connect for iOS/Android is like having your desk phone on your mobile. You can make and receive calls, hold calls, transfer calls, and make three-way calls. You can even push and pull calls from your phone to other twinned devices, mid-call.

You can also use Pod Connect for iOS/Android to send messages to other people in your corporate directory who are using Pod (on any device).

Pod Connect for iOS/Android uses the Wi-Fi, broadband, or mobile data services available, so you can make and receive calls without using your mobile minutes.
