

Overview

INFO: Before starting we strongly advise that you read the IP Requirements page [here](#). Firewall configuration is likely to be required to use Pod on a corporate or VPN network. This information may also be helpful for subscribers having problems connecting to use Pod.

Welcome to your Pod Unified Communications System.

Your Service Provider may have given you information on setting up, if so you should follow any instructions given by your Service Provider first.

We recommend that you first take the time to read through this Start Up Guide before making any changes. Depending on your package(s) some configuration options may not apply to some or all subscribers (users).

Before you continue, you must have an understanding of what your package consists of and how you would like calls to be managed/routed.

This guide assumes that you have a working internet connection to use with your package, Administrator access to any PC/Laptops that require Pod Connect to be installed and any mobile devices to hand that require Pod Connect.

TIP: If your package includes Desk Phones you can unpack and connect these phones to your network and power them on before starting. They may need to have a firmware update and require several reboots before they can be used.

This Start Up Guide will walk you through the following:

- [Logging Into The CommPortal](#)
- [Changing the CommPortal Password \(optional\)](#)
- [Downloading Pod Connect for Desktop/Android/iOS](#)
- [Recommended Settings for Pod Connect for Desktop](#)
- [Desk Phones](#)
- [Voicemail Configuration \(optional\)](#)
- [Music On Hold \(optional\)](#)
- [Testing Your System](#)
